

# FX Trade Alert

**SignalsTrader™**  
MT4 Expert Adviser

Version 1.0

Pair: USDCHF  
Pair ID: 209081764  
GMT: 5  
EST: 18:45  
LCT: 18:45  
DVT: 03:45

#8927235 sell

STOP: IN TRADE

Designed for MetaTrader  
For Members Only

The image shows a software interface for 'SignalsTrader™ MT4 Expert Adviser'. It features a central candlestick chart with green and red bars. A yellow circular badge in the top right corner indicates 'Version 1.0'. Below the chart, there is a red text alert that reads 'STOP: IN TRADE'. The interface is framed by a dark red border with yellow horizontal bars. Text at the bottom states 'Designed for MetaTrader For Members Only'. On the left side of the chart, there is a small text box containing technical details: 'Pair: USDCHF', 'Pair ID: 209081764', 'GMT: 5', 'EST: 18:45', 'LCT: 18:45', and 'DVT: 03:45'. Below the chart, there is a small text box with the text '#8927235 sell'.

Using such analysis may result in losses as well as profits.

## Installation

Thank you for choosing FX Trade Alert Systems Signals. The Signals Trader software is provided as a free tool to our trade alert members to place orders quicker and maximize profitability. The software is designed for Metatrader 4 platform, and will not work with any other platforms.

The software will work only if you are a current member, and will work only with the pair within the plans we provide. The software has some customizable features, but many are limited and pre-set to our trading strategy.

To install the software, locate the zip folder that you downloaded and follow the below instructions:

Once you unzip the file you will find the following folders:

1. EA folder
2. Templates folder
3. eBook

### **Setup (Make sure MetaTrader 4.0 is closed):**

#### **1) Expert Adviser**

- After you unzip file open EA folder and copy all files
- Paste to C:\Program Files\MetaTrader Directory\experts\  
**NOTE: Replace “C:\Program Files\MetaTrader Directory\” with your drive letter and directory where you have MetaTrader installed**

#### **2) Templates**

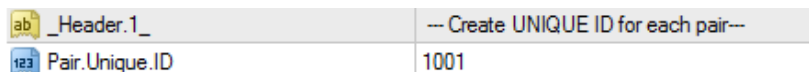

- After you unzip file open Templates folder and copy all files
- Paste to C:\Program Files\MetaTrader Directory\templates\  
**NOTE: Replace “C:\Program Files\MetaTrader Directory\” with your drive letter and directory where you have MetaTrader installed**

Any questions refer to <https://www.fxtradealert.com/support>.

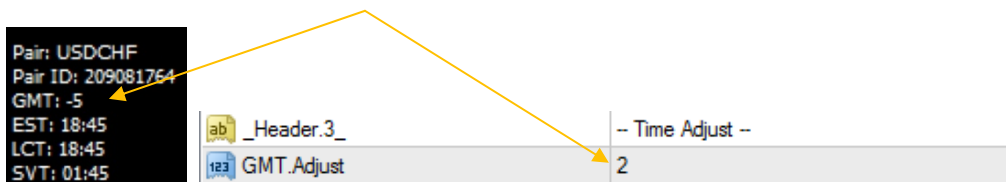

## Using Signals Trader

### IMPORTANT MESSAGE

- 1) **UNIQUE ID: A UNIQUE ID WILL AUTOMATICALLY BE CREATED FOR THE FIRST CHART YOU HAVE OPENED AND PLUG-IN THE EA TO, FOR THE FOLLOWING PAIRS: GBP/USD, EUR/USD, USD/CHF, USD/CAD, AUD/USD, NZD/USD, USD/JPY, SILVER & GOLD. IF YOU OPEN ADDITIONAL CHART FOR ANY OF THE PAIRS MENTIONED ABOVE OR ANY OTHER PAIRS AND PLUG-IN THE EA TO, THEN YOU NEED TO CREATE A UNIQUE ID FOR THAT CHART AND PAIR, OTHER WISE THE EA WILL NOT WORK AND WILL CAUSE THE EA TO CLOSE ANY OPEN ORDERS, POSSIBLE AT A LOSS. IF YOU LIKE TO BE SAFE, YOU MAY CREATE A UNIQUE ID FOR THE EACH CHART YOU HAVE OPENED WITH THE EA PLUGED-IN TO. YOU CAN USE SINGLE DIGIT TO AS MANY AS 20 DIGITS. WE RECOMMEND SINGLE SUCH AS 1, 2, 3, ETC...**

- 2) **IN ORDER FOR THE DAY TRADE EXPIRY HOUR TO WORK CORRECTLY, YOU MUST ADJUST THE GMT DIFFERENCE BETWEEN YOUR LOCAL TIME AND LONDON TIME. TO KNOW IF YOU HAVE THE CORRECT GMT, LOOK AT THE COMMENT AREA OF THE EA ON CHART TO THE LEFT. [See below images & image 1.1 on page 6](#)**

- 3) **SWITCHING TIME FRAMES ON A CHART, OR MODIFYING THE EA EACH TIME AFTER YOU PRE-SET THE ORDERS, WILL CAUSE THE EA TO RESET. RECOMMENDED THAT YOU CREATE A DEDICATED CHART FOR TRADING ONLY USING THE H1 CHART.**

Image 1.1

Using the Signals Trader is simple. You will notice three lines once you plug in the EA.

**Note: Lines may not appear immediately or when the market is closed to avoid immediate trading.**

#### Three lines color by default:

- 1) OpenLine: Open a Trade is Gold.
- 2) TPLine: Take Profit line is Blue.
- 3) SLLine: Stop Loss line is Red

#### To place a Buy order

- 1) To trade a buy order, place the OpenLine (Gold Line) to desired price.
- 2) To set the Take Profit, place the TPLine (Blue Line) **above** OpenLine to the desired Take Profit price.
- 3) To set the Stop Loss, place the SLLine (Red Line) **below** OpenLine to the desired Stop Loss price.
- 4) After you place the lines to desired price, now it is time to tell the EA the trade type. You need to specify the EA to “BUY” by typing a “B” or “b” in the “OpenLine” description box. [See image 2.1 and 2.2 on page 7.](#)

## To place a Sell order

- 1) To trade a sell order, place the OpenLine (Gold Line) to desired price.
- 2) To set the Take Profit, place the TPLine (Blue Line) **below** OpenLine to the desired Take Profit price.
- 3) To set the Stop Loss, place the SLLine (Red Line) **above** OpenLine to the desired Stop Loss price.
- 4) After you place the lines to desired price, now it is time to tell the EA the trade type. You need to specify the EA to “SELL” by typing an “S” or “s” in the “OpenLine” description box. [See image 2.1 and 2.2 below.](#)

## While IN TRADE

Once the trade is executed you will notice a label display “**STOP: IN TRADE**,” this label will continue to be displayed even after the trade is complete to avoid additional trades. **DO NOT SWITCH TIME FRAME OR REFRESH EA OR CHART WHILE IN TRADE, OR IT WILL CLOSE THE TRADE AT A LOSS.** To make a new trade move the lines to new desired price; then specify the trade type of “B or b” for buy, or “S or s” for sell, and then you must delete the label from the chart to activate the process again. If you wish not to make another trade soon, leave the “**STOP: IN TRADE**” label on chart, or disable the EA completely. By switching time frames after the trade is CLOSED, will reset the EA and delete the label for a new order.

## How to specify trade type?

After you place the lines to desired price, highlight “OpenLine,” gold line, and right click the mouse, then click on Horizontal Line Properties. Type desired trade type, such as ‘s’ or ‘b’, in the description box, and click OK.

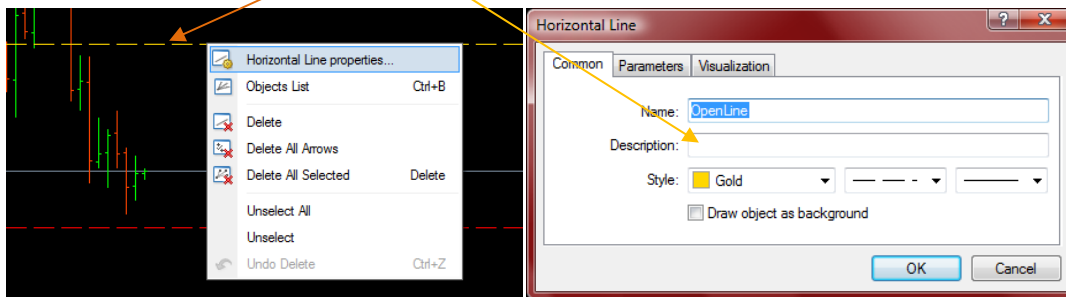

Image 2.1

Image 2.2

**NOTE: DO NOT CHANGE HORIZONTAL LINE NAMES OR THE EA WILL NOT WORK AND WILL GIVE AN ERROR.**

## Day Trade Trailing

Trailing by default is preset for trailing stop of profit Start at 10 pips for short trades. It may not work for all brokers where it has not been tested on all servers. If the alert is a swing trade you may turn that option **OFF** to false; however, it is always recommended to keep it **ON** for Day Trade or Swing Trade.

 _Header.4_	-- Trailing Day or Swing --
 DayTrade.Trailing.ON	true

## Day Trade Expiry Hour

For an additional security and to avoid any unwanted trades after a certain time and should target entry price never been hit. The EA has an option that is preset for the trade to Expire at 10:00 am EST. For swing trades, you will need to turn that option **OFF** to “false” from the EA properties.

 _Header.5_	-- Trade Time --
 DayTrade.ExpiryHour.ON	true

When the time has expired, a label will be displayed stating **TRADE TIME HAS EXPIRED**. To reset the EA and delete the label, you will need to disable the by typing “-1” in the ExpiryHour.Time box or set **ExpiryHour.ON** to “false,” and then you will need to delete the label.

**I hope I explained the use of the EA well. It is very important to understand how to use the EA to avoid any undesired trades.**

**Once again thank you for choosing my products and happy trading**
